Annual session 2014
2 to 5 September 2014, New York
Item 8 of the provisional agenda
UNFPA – Country programmes and related matters

UNITED NATIONS POPULATION FUND

Final country programme document for Timor-Leste

Proposed indicative UNFPA assistance: $15.5 million: $10 million from regular resources and $5.5 million through co-financing modalities and/or other resources, including regular resources

Programme period: Five years (2015-2019)

Cycle of assistance: Third

Category per decision 2013/31: Orange

Proposed indicative assistance (in millions of $):

I. Situation analysis

1. Timor-Leste is a post-conflict state that has recently emerged as a lower middle-income country. Peaceful democratic presidential and parliamentary elections were held in 2012, and the United Nations 13 year peacekeeping presence ended at the end of the same year. The country has $14 billion in oil wealth, while gross national income is $3,670 per capita. However, nearly 50 per cent of the population lives in poverty and the oil reserves are finite and may be depleted by 2024.

2. Timor-Leste frequently suffers from localized, extensive disaster events related to climate variability. In all, 78.5 per cent of Timorese are reported to have experienced shocks due to natural hazards.

3. In 2010, the population of Timor-Leste was 1.1 million. While the total fertility rate continues to decline, it stands at 5.7 – the highest in the region – and the annual population growth rate is 2.9 per cent. The total fertility rate is considerably higher in rural (6.0) than in urban (4.2) areas. The country is experiencing a youth bulge, with 32 per cent of its population between the ages of 10 and 24.

4. Population growth is expected to exert increasing pressure on the economy, resources and social service alike. Many of the underlying factors that fostered the 2006 political crisis persist – high youth unemployment (24.8 per cent for ages 15-24 in 2010), lack of opportunity and perceived disadvantages and marginalization.

5. There are considerable variances in fertility rates among residence, district, education and wealth quintiles. The majority of the population (70 per cent) lives in rural areas and experiences disparities in access to public facilities and other available infrastructure.

6. Estimates of the maternal mortality ratio range from 300 to 570 deaths per 100,000 live births. Among young women aged 15 to 19, the maternal mortality ratio is 1,037 per 100,000 live births. Skilled health personnel assist only 30 per cent of current deliveries, and facility delivery is low, at 20 per cent. The infant mortality rate is 74 deaths per 1,000 live births.

7. Contraceptive prevalence among married women aged 15 to 49 doubled between 2003 and 2009/2010, rising to 22 per cent, and has since stagnated in the low twenties. Nearly one in three women aged 15 to 49 have an unmet need for family planning, with women aged 20 to 24 having the highest unmet need.

8. Timor-Leste faces significant shortages in human resources for health – fewer than half the country’s health posts have staff with midwifery skills. To increase human capacity in the health system, Timorese doctors are currently being trained at medical schools in Cuba. Four hundred Timorese have already graduated and returned to Timor-Leste, with a further 600 graduates expected by 2015.

9. In 2010, 36 per cent of women aged 15 to 29 reported that they had experienced physical violence, and 75 per cent of married women reported that violence had come from a partner. In 2010, the national law against domestic violence was passed, followed by a comprehensive national action plan focused on multi-sectoral coordination of services. Despite strong policy reform and a dynamic role by civil society organizations, gaps between informal and formal justice mechanisms, capacity of service providers and implementation challenges, particularly in the health sector, indicate that violence against women and girls remains a significant problem throughout the country.

10. Although Timor-Leste is considered to have a low HIV prevalence rate (0.2 per cent), there is a concentrated epidemic among key affected populations – sex workers (1.5 per cent) and their clients, men who have sex with men (1.3 per cent) and transgender (2.6 per
Many young people are not equipped with the knowledge and life skills to manage sexually transmitted infections and HIV risk in an increasingly challenging environment. Comprehensive knowledge on HIV among youth is much lower in the poorest (11 per cent) than in the richest (35 per cent) wealth quintiles.

II. Past cooperation and lessons learned

11. The second country programme, 2009-2013, sought to work collaboratively with stakeholders to ensure: (a) equitable access to quality reproductive health services; (b) comprehensive responses to gender-based violence; (c) awareness raising for young people to make informed choices for a healthy, productive life; and (d) strengthened institutional capacity of the national statistics office and its operating systems.

12. The second country programme evaluation conducted in 2012 highlighted a number of key achievements, which included: (a) revision of the national reproductive health strategy; (b) development of a behaviour change communication strategy; (c) standardization of the midwifery curriculum at the National University of Timor-Leste; (d) strengthened family planning units in 67 per cent of community health centres; (e) development and advocacy of the law against domestic violence; (f) approval of a national action plan on gender-based violence; and (g) undertaking of the 2010 population and housing census.

13. The evaluation identified a number of lessons learned and made recommendations relevant to the next programme cycle, 2015-2019. In the area of reproductive and sexual health, it recommended: (a) developing the capacity of national trainers and supervisors in safe motherhood, family planning, gender-based violence and adolescent sexual and reproductive health; and (b) continuing to strengthen integrated sexual and reproductive systems, including the logistics management information system capacities of the Ministry of Health. In the area of gender equality, it recommended (c) reinforcing the role of the health sector in addressing gender-based violence issues; and (d) stepping up capacity building at the national, district and community levels to improve prevention, intervention and advocacy on gender-based violence. In the area of population and development, it recommended: (e) continuing support in the preparation of five-year censuses and other surveys; and (f) continuing work to formulate a national population policy that ensures population, reproductive health and gender concerns are integrated into all sectorial programmes.

III. Proposed programme

15. Although designated a lower middle-income country, Timor-Leste continues to require support in order to sustain earlier successes, address increasing geographic and wealth inequities in sexual and reproductive health, and reflect rights-based approaches. The programme will focus on capacity development and service delivery to avert maternal mortality and reduce unmet need for family planning. Advocacy and policy dialogue will continue to promote reproductive health and rights, empower young people and effectively respond to gender-based violence. UNFPA and other United Nations organizations will, where feasible, develop joint programmes and projects in the areas of maternal health, youth, gender-based violence, data for decision-making and humanitarian preparedness and response.
16. The programme will focus on vulnerable and underserved groups, with special attention given to addressing young women (15 to 24 years old) who experience the highest maternal mortality, greatest percentage of mistimed births and highest rate of gender-based violence. Attention will be given to addressing young men as supporters of family planning and maternal health and acknowledging their role in reducing gender-based violence. The programme will address disparities found in geographic locations by focusing on the capital (Dili) and five districts (Ainaro, Baucau, Bobonaro, Covalima and Oecusse) with the weakest sexual and reproductive health indicators – including a lower percentage of skilled birth deliveries and family planning demand and higher prevalence of gender-based violence, HIV and other sexually transmitted infections.

**Outcome 1: Sexual and reproductive health**

17. Output 1. Strengthened capacity of the national health system to improve access to and increase the demand for rights-based family planning. To achieve this output, UNFPA will support family planning efforts to address unmet need by: (a) enhancing the knowledge and skills of service providers through quality training; (b) improving the logistic management information system, forecasting and distribution of family planning and other reproductive health commodities and supplies in health facilities; (c) improving the quality of behavior change communication for increased use of sexual and reproductive health services; and (d) strengthening the knowledge base and provision of strategic information for programme and policy development and advocacy.

18. Output 2: Increased national capacity to deliver integrated sexual and reproductive health services and respond to gender-based violence. This output focuses on enhancing national capacity to achieve the targets of the national reproductive, maternal, newborn, child and adolescent health strategy through the continuum of care approach across the life cycle, and ensuring individual rights and equity in access. UNFPA will support initiatives to: (a) develop national guidelines and quality assurance mechanisms, including on building capacity for maternal death surveillance and response; (b) strengthen competency-based training capacity of national training institutions by formalizing relationships with regional training institutes; (c) strengthen human resources for midwifery, basic emergency obstetrical care and adolescent sexual and reproductive health; (d) strengthen the capacity of the health sector to respond to gender-based violence; and (e) partner with civil society for adolescent sexual and reproductive health information and services. HIV/AIDS prevention and the prevention and treatment of sexually transmitted infections will be integrated into the above capacity building efforts with special emphasis on interventions for young people.

**Outcome 2: Adolescents and youth**

19. Output 1: Increased national capacity to design and implement community and school-based comprehensive sexuality education programmes that promote human rights and gender equality. UNFPA will support this output by: (a) collaborating with the Ministry of Education to implement a school-based comprehensive sexuality education; and (b) supporting comprehensive sexuality and reproductive health education for youth outside the school environment through innovative approaches and partnerships. These programmes will promote the young people’s use of sexual and reproductive health information and services.

**Outcome 3: Gender equality and women's empowerment**

20. Output 1. Strengthened capacity of relevant government institutions and non-government organizations to implement the national action plan on gender-based violence. UNFPA will work to achieve this output by supporting efforts to: (a) advocate at the
national level for pre-service curriculum development for health sector response, inservice training, and capacity strengthening and outreach in selected districts; (b) piloting a multi-sectoral response, including referral mechanisms for gender-based violence; and (c) providing capacity building and technical assistance to relevant institutions and organizations to effectively implement and monitor the national action plan.

**Outcome 4: Population dynamics**

21. **Output 1: Strengthened national capacity for using data and evidence to develop, monitor and evaluate national policies and programmes in the areas of population dynamics, sexual and reproductive health, youth and gender equality**

UNFPA will work to achieve this output by: (a) providing technical support for the 2015 population and housing census and other population surveys; (b) strengthening the institutional and technical capacity of the National Statistics Directorate; (c) strengthening the capacity of selected line ministries in integrating relevant population issues into plans and policies; and (d) promoting awareness and policy dialogue among the public and decision makers on population dynamics, with particular attention to youth and women.

**IV. Programme management, monitoring and evaluation**

22. UNFPA will work with the Ministry of Finance, which in Timor-Leste oversees and monitors all development partners working in country. UNFPA will primarily use the national execution modality and collaborate with other United Nations organizations, such as the United Nations Entity for Gender Equality and the Empowerment of Women (UN-Women) and the World Health Organization (WHO), and key development partners. Key development partners include The Asia Foundation’s Ending Violence Against Women Program, the US Agency for International Development’s Health Improvement Project and the German government’s Peace Development, Youth Promotion and Fight Against Corruption—Peace Fund.

23. Together with the Government, UNFPA will develop a partnership plan and a monitoring and evaluation plan, and conduct programme monitoring, including field visits, and periodic progress reviews throughout the cycle. It will develop a database to facilitate annual tracking of progress, using process and results indicators. UNFPA will conduct thematic evaluations and the independent end-of-programme evaluation in 2018, according to United Nations Evaluation Group evaluation guidelines.

24. The country office consists of a representative and programme and operations staff. UNFPA will recruit necessary technical and management staff to support the implementation of the programme, and will provide additional support from the technical and programme staff of the UNFPA regional office, as required. In the event of an emergency, UNFPA will, in consultation with the Government, reprogramme funds to respond to emerging issues within the UNFPA mandate.
## RESULTS AND RESOURCES FRAMEWORK FOR TIMOR-LESTE

**National priority:** By 2030, Timor-Leste will have a healthier population as a result of comprehensive, high quality health services accessible to all Timorese people. In turn, this will have reduced poverty, raised income levels and improved national productivity.

**UNDAF outcome:** By the end of 2020, people of Timor-Leste, especially the most disadvantaged groups, benefit from inclusive and responsive quality health, education and other social services and are more resilient to hazard-related shocks.

### UNFPA strategic plan outcome | Country programme outputs | Output indicators, baselines and targets | Partners | Indicative resources
--- | --- | --- | --- | ---
**Outcome 1: Sexual and reproductive health** (Increased availability and use of integrated sexual and reproductive health services including family planning, maternal health and HIV, that are gender-responsive and meet human rights standards for quality of care and equity in access)

<table>
<thead>
<tr>
<th>Output indicator</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Percentage of family planning demand satisfied (15 to 49 years old)</td>
<td>Baseline: 42%; Target: 70%</td>
</tr>
<tr>
<td>Proportion of births attended by skilled attendants (15 to 49 years old)</td>
<td>Baseline: 30%; Target 65%</td>
</tr>
</tbody>
</table>

### Outcome indicators
- **Output 1: Strengthened capacity of the national health system to improve access to and increase the demand for rights-based family planning**
  - Number/percentage of health facilities in UNFPA-supported districts reporting no stock-out of contraceptives within the last six months
    - Baseline: 59/45%; Target: 133/100%
  - Number/percentage of health facilities UNFPA-supported districts providing at least three or more methods of family planning
    - Baseline: 94/71%; Target: 133/100%
  - Percentage of married men and women (aged 15 to 49) in UNFPA-supported districts who have knowledge of three or more family planning methods
    - Baseline: 40%; Target: 80% (Female)
    - Baseline: 40%; Target: 75% (Male)

### Output indicators
- **Output 1: Increased national capacity to deliver integrated sexual and reproductive health services and respond to gender-based violence**
  - Number of new/revised sexual and reproductive health enabling legislation, policies, strategies and guidelines implemented/initiated
    - Baseline: 6; Target: 10
  - Number/percentage of facilities providing 24/7 basic emergency obstetric care centre services as per national standards
    - Baseline: 4/6%; Target: 67/100%
  - Percentage of pregnant women in UNFPA-supported districts with birth preparedness/complication readiness plans
    - Baseline:0%; Target:50%
  - Number/percentage of UNFPA priority districts with functioning maternal death surveillance and response mechanisms
    - Baseline:0/0%; Target: 6/100%

**National development priority:** By 2030, Timor-Leste will be a strong cohesive and progressive nation where the rights and interests of the most vulnerable citizens are protected.

**UNDAF outcome:** By the end of 2020, in an enabling environment, young men and young women make informed choices for a healthier and more productive life as citizens who contribute actively to the peace and development of their country.
| National development priority: | Outcome 2: Adolescents and youth  
(Increased priority on adolescents, especially on very young adolescent girls, in national development policies and programmes, particularly increased availability of comprehensive sexuality education and sexual and reproductive health) | Outcome 2: Adolescents and youth  
(Increased priority on adolescents, especially on very young adolescent girls, in national development policies and programmes, particularly increased availability of comprehensive sexuality education and sexual and reproductive health) |
