

# HEALING WHEN CRISIS STRIKES

Millions in Syria and Yemen fleeing relentless conflict, the Rohingya seeking refuge in Bangladesh, girls abducted in Nigeria, Venezuelans driven by economic collapse into Brazil — today’s crises are becoming more widespread, complex and protracted and they continue to take a disproportionate toll on women and girls. War, human rights violations, underdevelopment, climate change and natural disasters are driving people to leave their homes in unprecedented numbers.

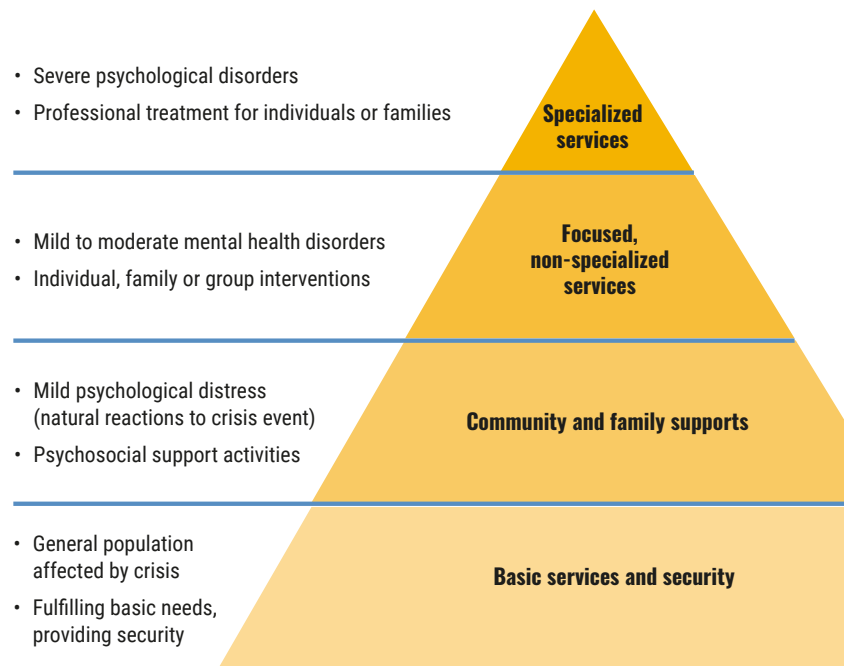

Humanitarian crises produce psychological suffering and trauma, which threaten the health and well-being of affected people, and erode global efforts for peacebuilding and recovery.

In 2019, nearly 143 million people needed humanitarian aid and protection. UNFPA estimates that more than 35 million are women and girls of reproductive age. UNFPA is working closely with humanitarian and development partners to provide lifesaving sexual and reproductive health services and to integrate urgently needed services for gender-based violence (GBV) in emergencies and mental health and psychosocial support (MHPSS).

UNFPA Country Offices are at the centre of efforts to provide integrated services for MHPSS to women and girls, and other at-risk groups through a multisectoral response in emergencies. Their work is documented in the 2019 publication “Healing When Crisis Strikes”, produced by the UNFPA Humanitarian Office.

The IASC Guidelines on Mental Health and Psychosocial Support in Emergency Settings are central guidance in programming in humanitarian relief response, designed specifically to protect, support and improve people’s mental health and psychosocial well-being in the midst of an emergency. MHPSS programming falls across the health and protection sectors.

## THE MHPSS INTERVENTION PYRAMID

This illustration is based on the intervention pyramid in the IASC Guidelines on Mental Health and Psychosocial Support in Emergency Settings (2007).

## BANGLADESH

Since targeted by violent attacks in August 2017, an estimated 745,000 Rohingya people – mostly women and children – have fled their homes in Myanmar to find refuge in Cox’s Bazar, Bangladesh. With UNFPA support, MHPSS services are being integrated with GBV and

sexual and reproductive health services for refugees and their host communities, where 1.2 million people are in need of humanitarian assistance. From April 2018 to July 2019, 46,515 women and girls received psychosocial support at 21 Women Friendly Spaces, which also offer livelihood training and engage men and boys in GBV prevention.

## LIBYA

In Libya, prolonged conflict and a recent escalation of violence are taking a heavy psychological toll. In the last 12 months, conflict in populated areas has directly affected an estimated 1.62 million people. UNFPA and partners launched the Rapid Response

Mechanism in April 2019, quickly reaching 9,500 newly displaced. Eight PSS mobile teams and four Women and Girls Safe Spaces are providing psychosocial support and GBV awareness activities to meet rising needs. From April to July 2019, psychological first aid and counselling were provided to 8,211 internally displaced persons.

## BRAZIL

More than 4 million people have fled economic and political upheaval in Venezuela, with hundreds each day pouring into Brazil, where some 180,000 have stayed. Since early 2018, UNFPA has provided direct assistance to over 9,000 Venezuelan refugees and migrants in the northern Brazilian

state of Roraima, as well as capacity building in case management for service providers and partners. With UNFPA support, the Center for Conviviality and Psychosocial Care in Roraima provides MHPSS services and family planning for displaced persons and GBV survivors. In the first half of 2019, the Center assisted 5,437 people.

## MYANMAR

Fragility, tension and violence persist in Myanmar, where natural disasters complicate challenging conditions. Nearly a million people are in need of humanitarian assistance, including 244,000 in camps or camp-like situations. UNFPA supports the integration of MHPSS in the national health

system, institutional capacity development and technical leadership to establish minimum standards. The MHPSS Peer Support Network has improved skills and supported humanitarian workers. Some 20,000 people received psychosocial support and nearly 5,000 attended MHPSS facilitation sessions.

## IRAQ

Though military operations against ISIS have ended in Iraq, the country’s post-conflict recovery includes a challenging humanitarian crisis with an estimated 8.7 million people in need of humanitarian assistance and protection. The Duhok Women’s Centre has been providing care

to GBV survivors since 2014 providing specialized medical, psychological and psychiatric services to Yazidi women. Throughout Iraq, nearly 368,000 women received psychosocial support and recreational activities in 2018 to June 2019. To build MHPSS capacity, a 10-week training programme was conducted to provide specialized care.

## NIGERIA

GBV is a defining characteristic of the ongoing conflict in north-eastern Nigeria, where 1.8 million women and girls of reproductive age remain at risk. UNFPA is working to ensure MHPSS is prioritized in primary health facilities, increase access to MHPSS for victims of trauma and GBV,

and reach remote communities. More than 30 Women and Girls Safe Spaces, training for health services providers and social workers, community counselling and livelihood skills training have helped hundreds of thousands over the past 10 years to receive support needed to rebuild their lives.

## SYRIA

Though millions have fled, 13 million internally displaced persons remain in Syria, including 3.8 million women and adolescent girls of reproductive age faced with limited to no access to reproductive health care, heightened risk of GBV and the mental health repercussions of eight years of war. MHPSS has been integrated into all 291 UNFPA-supported facilities. Building capacity through MHPSS training is expanding services and focusing on people with disabilities. UNFPA supported 31 Women and Girls Safe Spaces and 168 PSS mobile teams in 2018 through September 2019, reaching 164,000 people with MHPSS services.

## UKRAINE

Among the 1.3 million internally displaced persons in Ukraine, women are experiencing GBV three times more frequently than local women who are not displaced. UNFPA and national partners developed a system of psychosocial support for GBV in eastern areas using 46 mobile teams close to armed conflict zones, as well as safe spaces, health service delivery points and telephone hotlines. Considered a model mechanism, 200 more mobile teams have been introduced by local authorities outside the UNFPA intervention areas. From November 2015 through August 2019, 59,349 people received psychosocial support.

## TURKEY

Turkey hosts more refugees than any other nation – surpassing 4 million – a record held for the past five years. Most are from Syria, many were directly exposed to violence in their home country, and one million are women and adolescent girls of reproductive age. As of 2019, UNFPA established 35 Women and Girls Safe Spaces, soon to be run by the Government within primary health care, to provide services including mental health and psychosocial support. In 2018 through mid-2019, more than 143,000 refugees received MHPSS services, including LGBTI persons, sex workers and people living with HIV.

## YEMEN

Yemen is facing the world's largest humanitarian crisis, with 24 million people in need of humanitarian assistance, including some six million women and girls of reproductive age. Reported cases of GBV are rising. UNFPA supports the provision of psychosocial support, legal aid, access to safe spaces/shelters and referrals to health services. GBV services are being integrated with emergency reproductive health services. In 2018, 83 mobile teams, 23 safe spaces, six women's shelters and three specialized psychological care centres delivered vital mental health and psychosocial support reaching more than 50,000 people.

## UNFPA COUNTRY OFFICE CONTRIBUTORS

The country examples in "Healing When Crisis Strikes" were produced by the UNFPA Humanitarian Office with invaluable support from contributors in UNFPA Country Offices.

**BANGLADESH:** Catherine Bean, Sarah Baird

**BRAZIL:** Irina Bacci, Patricia Rangel

**IRAQ:** Lionel Laforgue, Salwa Moussa, Insherah Musa

**LIBYA:** Marta Dafano, Abdulrahman Khalifa, Ahlam Sofan

**MYANMAR:** Adib Asrori, Mollie Fair, Lai Win Phu and Eri Taniguchi

**NIGERIA:** Joy Michael, Chiazam Onyenso

**SYRIA:** Ameerah Ahmad, Widad Babikir, Omar Ballan, Fabrizia Falcion, Kinda Katranji, Hala al-Khair

**TURKEY:** Duygu Arıĝ, Gokben Bilgen, Dr. Selen Örs Reyhaniođlu, Fatma Hacıođlu Sarıdaĝ, Nazlı Moral Uydu

**UKRAINE:** Olesia Kompaniiets, Nadiia Kovalevych, Angelina Virchenko

**YEMEN:** Salwa Al-Azzani, Fahmia Al Fotih, Ammar Al-Ghawri, Abuldrahman Al-Muaalemi, Lankani Sikurajapathy

**“Mental health and psychosocial support”** refers to any type of local or outside support that aims to protect or promote psychosocial well-being and/or prevent or treat mental disorders. Examples of UNFPA-supported MHPSS interventions include:

- Women and Girls Safe Spaces
- Psychosocial support (PSS) mobile teams
- Basic emotional support from trained staff and volunteers
- Psychological first aid and basic mental health care workers
- Specialized psychological care centres
- One-stop centres for GBV multisectoral response
- Social and cultural activities for women
- GBV case management
- Encouraging and strengthening community support
- Livelihood activities and training
- Risk mitigation
- Integrating MHPSS into health systems
- Advocacy to raise awareness of GBV

MHPSS activities form part of standard humanitarian response and should be a central component of both short- and long-term GBV-specialized programming, as articulated in the Minimum Standards for Prevention and Response to Gender-Based Violence in Emergencies.

**“Gender-based violence”** is an umbrella term for any harmful act that is perpetrated against a person’s will and that is based on socially ascribed (i.e. gender) differences

between males and females. The gender discrimination and inequality that drives this violence every day in every culture places action to end GBV squarely in the realm of protecting and promoting universal human rights.

**“Psychosocial support”**, including opportunities for social networks and solidarity building among women and girls, is a critical intervention that contributes to survivors’ safety, healing and recovery.

Women and Girls Safe Spaces are an effective psychosocial support intervention. These accessible, safe and female-only spaces are where women and girls can go to receive services, support or seek immediate safety if they are at risk of GBV. In 2018, UNFPA supported 915 safe spaces in 44 countries to support psychosocial well-being, connect to services, reduce isolation or seclusion and enhance integration into community life. Individual empowerment and psychosocial support services are core to all safe spaces. Also, it is important that psychosocial support for women and girls is informed by an understanding of their experiences of violence and discrimination.

Another key intervention area is GBV case management, a collaborative process that engages a range of service providers to meet a survivor’s immediate needs and support long-term recovery. The consistent communication and emotional support provided in a trusting relationship with a trained case manager, health provider, or social worker is a form of psychosocial support.

*The Inter-Agency minimum standards provide 16 standards for GBV in emergencies programming. The 2019 guidance aims to improve accountability and quality. Standard 5 focuses on Psychosocial Support, calling on GBV actors to ensure that women and girls safely access quality, survivor-centred psychosocial support focused on healing, empowerment and recovery.*
