UNFPA Global COVID-19 Situation Report No. 4

Reporting Period: 1- 31 July 2020

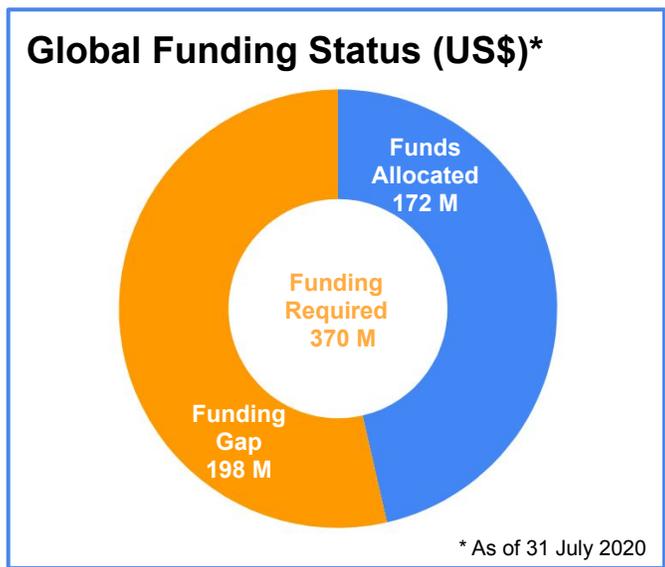

Situation in Numbers

- 21,516,760** Confirmed COVID-19 Cases
- 766,663** COVID-19 Deaths

Source: WHO 17 August 2020

- ### Global Highlights
- UNFPA's overall response to the COVID-19 pandemic centers on the **continuity of sexual and reproductive health services (SRH) and gender-based violence (GBV) prevention and response, risk communication and community engagement, and provision of lifesaving supplies** including contraceptives, maternal health drugs and supplies, and personal protective equipment (PPE).
 - UNFPA has reached millions of women and adolescents with services, information and supplies. This includes over 5 million people assisted with integrated services in countries covered in the UN [global humanitarian response plan](#).
 - While the disruption of SRH services and supplies is indicated in many countries, UNFPA support to maternal and newborn health is continuing globally. This includes efforts to reduce the disruption of access to modern contraceptives.
 - As the lead agency of the GBV Area of Responsibility under the UNHCR-led Protection Cluster, UNFPA is leading GBV coordination groups in 43 out of the 63 countries covered by the global humanitarian response plan.
 - GBV service provision in targeted geographic areas is improving. While 16 out of the 40 countries (where data was available as of July) initially saw significant GBV service interruptions, 26 of them have now maintained or expanded GBV services. This is a strong result for UNFPA. Where feasible, women and girls subjected to violence, including those with disabilities, are receiving essential services, and UNFPA is continuing to set up mechanisms to identify and report cases of GBV.
 - UNFPA contributed to the July update of the UN [global humanitarian response plan](#), which is targeting nearly 250 million people with an appeal of \$10.26 billion, up from the US\$6.7 billion needed in May. UNFPA has developed a [body of technical briefs](#) to guide the work on ground, and in the context of the [WHO global strategic preparedness and response plan](#), [UNFPA COVID-19 global response plan](#) and the UN Secretary-General's [policy briefs](#) on COVID-19 response.

- ### Key Population Groups
- 97 M** Pregnant Women
 - 1.6 B** Women of Reproductive Age
 - 1.6 B** Young People (age 10-24)
 - 483 M** Older Persons (age 65+)

Leadership, Coordination and Partnership

At country, regional and global levels, UNFPA is coordinating efforts to reduce the spread and negative impacts of COVID-19, working with governments, other UN agencies, NGO and private sector partners. Using an integrated “whole of organisation” coordination approach, UNFPA is responding to COVID-19 as a protracted situation, focusing on resiliency, flexibility and agility of its operational, programmes and policies. This includes strengthening preparedness capacities for future outbreaks, and in particular in regions where the pandemic has not peaked. UNFPA is leading these efforts through 150 country offices, six regional offices, liaison offices and New York headquarters.

- **At the global level**, the UNFPA Executive Director participates in the Inter-Agency Standing Committee (IASC) Principals meetings coordinating the IASC collective’s COVID-19 response. UNFPA’s Executive Director also participates in meetings of the Secretary-General’s Executive Committee for high-level decision making in the overall COVID-19 response. UNFPA participates at the Deputy Executive Director level in the **UNSDG Task Team on the implementation of the UN framework for the immediate socio-economic response to COVID-19**. In addition, the Director of the Humanitarian Office participates in the IASC Emergency Directors Group. Furthermore, UNFPA’s Humanitarian Office is fully engaged participating in the IASC Operational Policy and Advocacy Group (OPAG) and related Reference Groups meetings.
- **UNFPA collaborates with the Executive Office of the UN Secretary-General** on an ongoing basis to develop Secretary-General reports and briefs on COVID-19 in areas such as gender, human rights, people on the move, children, older persons and mental health, with participation of field staff. UNFPA co-authored the health pillar of the UN framework for the immediate socio-economic response to COVID-19, and provided contributions to the other pillars of social protection and basic services, economic recovery, and multilateral collaboration.
- **UNFPA is a member of the WHO-led UN Crisis Management Team** that provides strategic leadership on the health response, and is a member of the COVID-19 Supply Chain Task Force (WHO, WFP, UNICEF, UNOPS, UNDP, UNFPA, UNHCR). The Task Force provides strategic direction to ensure that the most critical gaps in supplies are identified and met in a timely fashion. UNFPA is one of 13 UN agencies and NGOs for which UNICEF leads global tender for procurement of personal protective equipment – masks, gloves, gowns and others – to cover the forecasted PPE needs for the COVID-19 response. Efforts continue to procure hard-to-obtain products. UNFPA supports the UN global initiative, [Verified](#), to combat misinformation amid the COVID-19 pandemic.
- **UNFPA works within international humanitarian and development systems** to ensure that the needs of women, girls and young people are included in COVID-19 guidance, response plans and country-level implementation. UNFPA’s work contributes to prevention and control of the pandemic to ensure the continuity of essential services for women, young people and vulnerable populations such as older persons, persons with disabilities, LGBTQI, ethnic minorities including Afro-descendants and indigenous people in COVID-19 affected areas. UNFPA also works to protect frontline health and social workers, 70 per cent of whom are women that need PPE.
- **At the regional and country levels**, UNFPA participates in the WHO Regional Crisis Management Group and various coordination mechanisms, including the UN Country Team and Humanitarian Coordination Team, and supports the respective national COVID-19 Preparedness and Response Plans ensuring integration of SRH and GBV concerns, and mitigation of social and economic impacts, including protection from GBV and prevention of sexual exploitation and abuse. UNFPA country offices have been spearheading various COVID-19 impact assessments on SRH and increased risk of GBV among women and girls, including those most vulnerable such as persons with disabilities, older persons, refugees, internally displaced persons and migrants.
- **UNFPA leads the GBV sub-cluster coordination in 43 humanitarian settings**, under the global protection cluster, and leads many SRH sub-working groups in the context of the health cluster.
- UNFPA offices are coordinating the procurement and logistics of humanitarian relief supplies as they relate to UNFPA’s mandate and COVID-19 response. UNFPA supports COVID-19 Humanitarian Operation Cells, or similar mechanisms, to address service delivery constraints and advocate for physical access.

UNFPA Global Response Plan to COVID-19

UNFPA appealed for \$370 million through its COVID-19 Global Response Plan. As of 30 July, \$54.43 million has been received. UNFPA's top donors to the COVID-19 response include Australia, Canada, Denmark, Iceland, Norway and the United Kingdom, the UN COVID-19 Response and Recovery Fund, the UN Central Emergency Response Fund and the World Bank. This support has enabled UNFPA to quickly respond to COVID-19 around the world. Funding provided through the UNFPA Humanitarian Action Thematic Fund (\$22.2 million) allows UNFPA the flexibility to respond to needs as they arise in humanitarian contexts.

The **Government of Germany** has [increased its flexible funding by €30 million](#) to support UNFPA's global response to the COVID-19 pandemic. This makes Germany UNFPA's largest current provider of unearmarked "core funding."

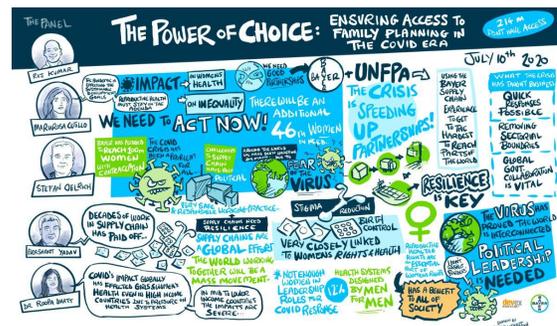

Strategic Partnerships with the Private Sector

UNFPA is engaging with private partners globally, regionally and at country level in support of the COVID-19 response through partnerships for resource mobilization, reach and the development of new technologies, innovative tools and solutions to meet immediate, medium and long-term needs. The highlights include:

- UNFPA's Individual Giving Coronavirus Emergency Campaign: [Protect Pregnant Women, New Mothers and Newborns](#) to engage the public in UNFPA's COVID-19 response has raised \$578,000 to date from more than 9,000 new donors.
- Takeda Pharmaceutical Company Limited's \$4.6 million support to UNFPA's COVID-19 response will ensure the continued provision of life-saving maternal and newborn health services to at least 350,000 women and newborns in Benin, Guinea and Togo, including 17,600 women facing life threatening complications during the COVID-19 pandemic.

Reach and Visibility

- UNFPA participated in the virtual discussion co-hosted by Devex and Bayer "[The power of choice: Ensuring access to family planning in the COVID-19 era](#)". The panelists, including global health and supply chain leaders, emphasized the need to safeguard sexual and reproductive health and rights during the coronavirus pandemic.

- UNFPA collaborated with Claudia Lumor, Founder of Glitz Africa and UNFPA Honorary Goodwill Ambassador for Ghana, on the virtual *SHE SUMMIT series - Resilient. Empowered: Her Rights, Her World, in times of COVID-19*. The SHE Summit mentorship platform gathers high-achieving women in various fields to inspire and impart knowledge to young women.
- UNFPA continues its engagement with private sector companies for in-kind support of IT equipment, digital technologies and logistical support for the COVID-19 response.

Parliamentarians and Civil Society Organizations

- UNFPA participated in the formal virtual Parliamentary Forum of the High-Level Political Forum "The Big Reset: Learning from COVID-19 to fast-track the SDGs". The discussions highlighted the economic response to COVID-19 and the need to address universal health coverage, social protection, environmental preservation among other priorities.

Global Response Summary

UNFPA overall response to COVID-19 aligns with the [2030 Agenda](#), the [WHO global Strategic Preparedness and Response Plan \(SPRP\)](#), the [UN-coordinated Global Humanitarian Response Plan \(GHRP\)](#), the [UN framework for socio-economic response to COVID-19](#), and [UNFPA's COVID-19 global response plan](#).

The UNFPA COVID-19 regional situation reports continue to document the work of regional and country offices supporting SRH and GBV work, championing risk communications, engaging communities, particularly the youth, and providing life saving commodities and supplies. (See links below for the latest editions)

Addressing GBV and harmful practices

- While 16 of 40 countries (where data was available in July) initially saw significant GBV service interruptions, 26 have now maintained or expanded GBV services – a strong result for UNFPA.
- UNFPA is working to ensure updating of strong referral pathways (with alternative modalities for referrals such as online and phone-based as necessary) and appropriate prepositioning and distribution of necessary supplies, including PPE, and measures to mitigate risk, for prevention and adequate response to GBV.
- The GBV AoR helpdesk has continued support to GBV practitioners in the field in developing briefs, research and guidance, not only on adapting GBV responses to COVID-19 but also addressing other challenges and specific themes relevant to GBV prevention and response. More resources from GBV AoR helpdesk can be found [here](#).
- Since multiple countries did not have any GBV coordination team prior to the COVID-19 pandemic, UNFPA, as the lead agency of the GBV Area of Responsibility, has developed a guidance note on Establishing GBV Coordination Groups for these new countries. The guidance is specific for the countries with no previous humanitarian structure in place; that is for those without IDP or refugee response mechanisms.
- The latest resources developed by regional GBV coordination groups include the [Guía Técnica Servicios de Apoyo Psicosocial Remoto Para Sobrevivientes de VBG](#) (Latin America and the Caribbean region) and [How to Mitigate Risks of Gender-Based Violence for Women and Girls in the Desert Locust Response](#) (East and Southern Africa region)

Harmful practices against women and girls

There is evidence that harmful practices are being exacerbated during COVID-19. To address this, UNFPA is undertaking advocacy, targeted communications and community mobilization through media campaigns and webinars to raise awareness and preventive action.

Child Marriage and COVID-19

The UNFPA-UNICEF Global Programme to End Child Marriage has been making several COVID-19-related pivots in programming in the 12 programme countries (in Asia Pacific, Arab States and Africa regions). These include:

- Girls' empowerment: Harnessing digital and technology solutions to maintain engagement with girls and deliver life skills, health information and remote education
- Health and protection: Maintenance of essential health services, including SRH services, providing adolescent girls with dignity and sanitary kits, and using child helplines and online platforms to provide mental health and psychosocial support.
- Partnerships: Engaging in new partnerships with local and civil society organisations to ensure continued contact with girls.
- Evidence, research and rapid assessments
 - Supporting data and evidence generation on the impact of COVID-19 on adolescent girls and families.
 - South Asia: Review of child protection systems change and programming response, including child marriage.
 - West and Central Africa: Impact study in 13 countries on child marriage and FGM programme delivery during COVID-19.
 - Ghana: Phone survey with parents conducted monthly, including on adolescent pregnancy.
 - Ghana: Long-term study on the impact of COVID-19 on children and on operationalizing a Public Finance for Children framework.
 - Niger: Intersectoral study on the impact of COVID-19 on child marriage, looking at girls' return to school.
 - East and Southern Africa: Survey on youth and SRH challenges in the times of COVID-19, through youth networks.
 - East and Southern Africa: Collection of helpline data to track calls related to child marriage
 - Mozambique: Poll on violence against children.
 - Uganda: Study on the implications of COVID-19 on child marriage.

Risk communication and community engagement

- An [inter-agency webinar](#) was held by UNFPA, WHO, UNICEF, UNESCO, Y-Peer, NRC and other key youth networks to highlight the role of young people on “infodemic management” including risk communication, community engagement, media and information literacy, and access to information. The webinar also tackled how to establish a collaborative platform between youth organisations and networks and UN agencies in order to support young people in the COVID-19 response.

Comprehensive sexuality education and COVID-19

- UNFPA together with Girls Health Ed, Be Girl and the Wilson Center, jointly conducted a virtual roundtable on *gender-transformative responses to comprehensive sexuality education (CSE)* during and after the COVID-19 pandemic. 38 global, regional and national experts, and youth leaders joined the roundtable to discuss the importance of gender-transformative CSE in a pandemic, and to encourage communities to adopt it as a complementary solution to school dropouts, poverty, and the gender confidence gap.

Adolescent and youth

[The Compact for Young People in Humanitarian Action](#)

- The Compact, under the leadership of UNFPA, launched the [Youth Compact Champions Programme](#), to provide 18 months support to 20 young leaders who have been affected by humanitarian crisis and have experience of leading humanitarian action. The Compact Champions have been inducted into the five task-forces of the Compact: 1) Supporting the design and evaluation of initiatives by the Compact to deliver on its 5 key actions (services, participation, capacity, resources and data); and 2) Mobilising over 1,000 young people around the world to engage in Compact initiatives.

[#Youthagainstcovid19 campaign](#)

- For International Youth Day, UNFPA launched a youth day challenge under #YouthAgainstCOVID19 to hear from young people about how they are coping with COVID-19, and how they think young people will influence the new normal.
- To this end, UNFPA has teamed up with Scouts and many other youth partners to disseminate a short template that has 3 questions for young people to join the conversation. The challenge will also be disseminated with a special design Instagram filter and be open for video submissions for young people that are not on the Prezi Platform.

HIV prevention amidst COVID-19

- UNFPA advocated for further support to HIV key populations, in light of COVID-19, through the High-Level Political Forum side-event, and interagency working group on key population, on the impact of COVID-19 on key populations. These populations require access to quality, safe and non-discriminatory services for HIV in the context of the pandemic.
- Access and use of condoms remain important for the prevention of unintended pregnancies and sexually transmission of HIV and STIs. In 2020, for the first time, the Global Fund earmarked funds for the procurement and programming of male and female condoms and lubricants. Several countries were invited to include these in their 2020-2022 funding cycle.
- To support this process and anticipate the need for technical assistance, UNFPA and partners conducted a global survey on the status of condoms programming in countries where UNFPA works. Of the 19 African countries that completed the questionnaire, 10 do not have current condom strategies and another four will expire this year. In the Caribbean, only Jamaica had a national condom strategy and it expired in 2012. The review is continuing to determine the countries that will require support.

Surge Deployment Overview

In July, UNFPA released new [guidelines around recommencing physical surge deployments](#), which will be implemented on a case-by-case basis against a set of predefined minimum standards. Remote-based deployments are still ongoing and will most likely continue for an indeterminate amount of time.

- During July 2020, there were a total of 11 new deployments making a total of 37 deployments during the month.
- UNFPA currently has 7 personnel deployed in Bangladesh, Burkina Faso, Cameroon, Colombia, Latin America and the Caribbean and Syria. The majority of these assignments require telecommuting. However, a few countries are beginning to initiate phases of return to the office and field.
- There are approximately 23 remote-based assignments ongoing for Afghanistan, the Arab States Regional Office, Bangladesh, Honduras, Kenya, Mozambique, Myanmar, Namibia, Nepal, Pakistan, Syria, Turkey, Vanuatu, Venezuela and Yemen. Such assignments are covering profiles in MHPSS, GBV Coordination, GBV information management, GBV and SRH programming, gender mainstreaming and disability inclusion, humanitarian coordination, operations support, communications, M&E, and Logistics.
- UNFPA continues to receive in-kind support from standby partners and donors such as DFID, NORCAP, the Danish Refugee Council and the Government of Canada.
- Our partners have also assisted in extending contracts in situations where surge personnel have not been able to leave the country due to border closures to ensure their safety and well-being.
- Out of all the deployments in July, 57% were filled by women.

COVID-19 has amplified the vulnerability of older people in Moldova. With UNFPA's support, young volunteers are building bonds with older citizens to benefit both generations. ©UNFPA Moldova.
