PROJECTIONS OF NUMBER OF YOUNG GIRLS, AGES 15-19, WHO WILL EXPERIENCE FGM/C FROM 2010-2030

Technical Division, UNFPA
September 2013
When will we achieve the goal of reducing FGM/C by half?

Globally, the prevalence of FGM/C declined by 5 percent between 2005 and 2010, from 49 percent to 47 percent.

If the past trend continues (an annual rate of reduction of 1%), we won’t be able to achieve the goal of reducing FGM/C by half until 2074.

How the required acceleration compares to observed rates of progress in the past?

To achieve the goal by 2030, we will require an ARR of 3.2 percent.

To achieve the goal by 2020, we will require an ARR of 6.4 percent.

To achieve the goal by 2015, we will require an ARR of 12.9 percent.
How many more girls will experience FGM/C if current prevalence remains unchanged?

By the end of 2010, 13.7 million girls aged 15-19 have experienced some form of FGM/C.

If current prevalence remains unchanged, in the year of 2030, 20.7 million girls aged 15-19 (born between 2010-2015) will have experienced some form of FGM/C – an increase of more than 50% from 2010.

In West and Central Africa, the number of girls age 15-19 experience FGM/C will increase from 4.5 million in 2010 to 7.8 million in 2030, an increase of more than 70%.

Over the next 20 years, worldwide, 86 million girls age 15-19 are likely to experience some form of FGM/C.

* The indicator of prevalence of FGM/C among girls age 15-19 only captures a certain point in time and these young girls might be cut at a later stage in their live. Estimates and projections of number of girls aged 15-19 experiencing FGM/C can be underestimated.

Notes: The sum of the number of girls experience FGM/C by region may differ from the WORLD total due to rounding. The data on population used to calculate the number of girls experience FGM/C is from World Population Prospects: The 2012 Revision.
By the end of 2010, of the 29 countries where FGM/C is prevalent, 4 countries had more than 800,000 girls that have experienced some form of FGM/C.

If current prevalence remains unchanged, in the year of 2030, 8 countries will have more than 800,000 girls that have experienced some form of FGM/C.
Where are the girls that experience FGM/C?

Distribution of number of girls aged 15-19 experiencing some form of FGM/C, by region and country, 2010 and 2030

The practice of FGM/C is mainly performed in Africa (Eastern and Southern Africa (27%), West and Central Africa (33%)), and Arab States (40%)

Because of population growth, by the year 2030, the distribution of girls that will have experience some form of FGM/C in West and Central Africa will increase to 38% (from 33% in 2010)

More than 66% of FGM/C practice occur in just four countries – Ethiopia (22%), Egypt (22%), Sudan (11%) and Nigeria (11%)

Of the four countries, the distribution of Nigeria will increase from 11% to 13% by 2030

Notes: Data not available for South Sudan.
